Welcome to the Launch issue of Go Green Ezine.

It's a real pleasure to welcome you to the very first edition of a magazine created with one clear purpose: to make sustainable living practical, inspiring, and achievable for everyone. Go Green Ezine was born from a growing belief that the future of our homes, businesses, and communities must be smarter, cleaner, and kinder to the planet—without compromising on comfort or quality of life.

In this launch issue, we place a strong focus on passive building, a construction approach that represents one of the most effective ways to reduce energy consumption from the ground up. Passive buildings are not about futuristic gimmicks; they are about intelligent design, superior insulation, airtight construction, and thoughtful use of natural light and heat. The result is healthier indoor environments, dramatically lower energy bills, and buildings that stand the test of time. As energy costs continue to rise, passive building is no longer a niche concept—it's a sensible, future-proof solution.

Alongside this, we shine a light on the rapidly evolving world of solar energy. Solar power has moved from the margins into the mainstream, offering homeowners and businesses the opportunity to generate clean electricity, cut carbon emissions, and take control of their energy needs. In these pages, you'll find insights into the latest solar technologies, real-world installations, and expert advice designed to help you make informed decisions—whether you're taking your first step or expanding an existing system.

We also explore the growing importance of EV charging infrastructure, a critical piece of the sustainability puzzle. As electric vehicles become an everyday reality, accessible and efficient charging solutions are essential. From home chargers to workplace and public charging networks, EV infrastructure is transforming how we think about transport, mobility, and emissions. Supporting this transition is not just about convenience—it's about building a cleaner, quieter, and healthier future.

Go Green Ezine is more than a magazine; it's a platform for ideas, innovation, and action. Our aim is to connect readers with trusted experts, forward-thinking companies, and practical solutions that make going green achievable today—not someday.

Thank you for joining us at the beginning of this journey. We hope this launch issue informs, inspires, and empowers you to be part of the green transition. The future is sustainable—and it starts here.

EXPERTS IN:

House Kitchens Rathnew: Crafting the Heart of the Home in Co Wicklow

In every home, there is one space that quietly shapes daily life more than any other. It is where mornings begin, conversations unfold and memories are made around shared meals. At House Kitchens, Rathnew, Co Wicklow, this understanding sits at the core of everything they do. More than a kitchen supplier, House Kitchens is a design-led studio dedicated to creating spaces that genuinely work for modern Irish living.

Located in the growing design and home improvement hub of Rathnew, House Kitchens has become a trusted name across Wicklow and beyond for homeowners seeking kitchens that balance elegance, functionality and long-term value. Their approach is refreshingly human. Rather than leading with trends or templates, the team begins by listening — understanding how a family lives, cooks, entertains and relaxes within their space.

This emphasis on lifestyle-led design is what elevates House Kitchens from the ordinary. Every kitchen is thoughtfully planned, ensuring that flow, storage and usability are

just as carefully considered as aesthetics. Whether it's a compact kitchen that needs to work harder or a spacious open-plan layout designed for entertaining, each project is tailored to the individual home.

Design That Endures

While trends come and go, House Kitchens focuses on creating designs with longevity. Clean lines, balanced proportions and timeless finishes define their work. From contemporary handleless kitchens to classic shaker styles, the designs are rooted in practicality and visual harmony rather than fleeting fashion.

The Rathnew showroom provides clients with the opportunity to experience materials, finishes and layouts firsthand. This tactile experience is a key part of the design journey, allowing homeowners to visualise how their kitchen will look and feel long before installation begins. It's a space that inspires confidence — not through excess, but through quality and clarity.

Craftsmanship and Quality at Every Stage
A defining feature of House Kitchens is their unwavering commitment to quality. From cabinetry and worktops to hinges, handles and appliances, every element is carefully selected to ensure durability and performance. These are kitchens built to withstand the realities of everyday life, not just to photograph well.

Precision manufacturing and expert installation ensure a flawless finish, while thoughtful details — soft-close drawers, intelligent storage solutions, seamless appliance integration — enhance the daily experience of using the kitchen. It's craftsmanship that is felt as much as it is seen.

A Seamless Client Experience

Kitchen renovation can be one of the most significant investments a homeowner makes, and House Kitchens understands the importance of trust. Their end-to-end service is designed to remove uncertainty and stress from the process. From initial consultation through design, production and installation, clients are guided with transparency and professionalism.

Clear timelines, honest advice and a collaborative approach ensure that expectations are not only met but exceeded. This commitment to service

has earned House Kitchens a strong reputation built largely on word-of-mouth recommendations — a true marker of quality in the home interiors sector.

Rooted in Wicklow, Designed for Modern Ireland

As a Wicklow-based business, House Kitchens brings a local sensibility to its work while delivering design standards that compete on a national level. The company understands Irish homes — their layouts, their rhythms and their evolving needs. This local insight allows them to create kitchens that feel naturally suited to their surroundings, whether in a contemporary new build or a character-filled family home.

The True Measure of a Kitchen

Ultimately, the success of a kitchen isn't measured by how it looks on day one, but by how it performs year after year. House Kitchens Rathnew excels because it understands this truth. Their kitchens are spaces designed to be lived in, shared and enjoyed — places where form and function exist in perfect balance.

In shaping kitchens that truly serve as the heart of the home, House Kitchens continues to set a benchmark for thoughtful design and enduring quality in Co Wicklow and beyond.

COZY HOMES MODULAR IRELAND

**Redefining Modern Living
with Sustainable, Efficient,
Modular Homes**

A New Approach to Home Building
Cozy Homes Modular champions modular construction — a method of building in which homes are prefabricated off-site in controlled factory conditions and then transported to the final location for rapid assembly. This approach contrasts sharply with traditional construction, which is often slower, more labour-intensive and exposed to weather-related delays. By standardising processes and managing most of the build in a production facility, Cozy Homes Modular can deliver completed structures in weeks rather than months, helping homeowners avoid the prolonged timelines associated with conventional builds.

Their philosophy centres on three core benefits:

Speed of delivery: With factory construction and fast on-site assembly, clients often see dramatic reductions in overall build times.

Quality and consistency: The factory environment allows for meticulous quality control, ensuring each home has finished plumbing, electrics and structural integrity before delivery.

Sustainability and energy efficiency: Modular homes from Cozy Homes are designed with strong insulation, triple-glazed windows and eco-friendly materials that help reduce energy consumption and lower lifetime costs for occupants.

In an era marked by rising construction costs, housing shortages and growing environmental concerns, Cozy Homes Modular Ireland is emerging as a fresh and innovative player in Ireland's housing sector. Founded in mid-2025 and based in Naas, County Kildare, Cozy Homes Modular Limited is a private company that aims to transform how homes are designed, built and delivered in Ireland — offering sustainable, affordable and high-quality modular living solutions tailored to modern lifestyles.

Flexible Designs for Diverse Needs
One of the standout features of Cozy Homes Modular's offering is the versatility of its home designs. Whether customers are seeking a compact garden studio, a family home, or a customised living space, the company provides options that can be tailored to individual plots, budgets and lifestyle preferences.

Among their highlighted models are:
Cabin Grace — A thoughtfully designed space offering comfort and functionality in a compact footprint.

Cabin Kayla — A slightly larger option with two bedrooms, ideal for couples or small families.

Cabin Orla — A cost-effective, smaller cabin solution.

These homes include standard features such as fully finished bathrooms, pre-wired electrics and plumbing, quality floor finishes, and energy-efficient features that underscore the company's commitment to practicality without compromising on comfort.

The Process: Simple and Customer-Focused
Cozy Homes Modular guides clients through a streamlined three-step process: Design consultation and planning — Clients start by choosing the home style and layout that fits their needs and budget.

Factory construction — Modules are built in a controlled environment with strict quality checks, minimising waste and delays.

On-site delivery and installation — Finished modules are transported and assembled

quickly on prepared foundations, then connected to essential utilities.

This customer-focused workflow simplifies what can otherwise be a daunting construction journey. It also opens the door for those who may have been discouraged by the complexity and cost of traditional builds.

Meeting the Moment: Modular Homes in Ireland's Housing Market

The emergence of Cozy Homes Modular comes at a time when modular construction is gaining wider attention across Ireland. As housing affordability remains a pressing issue and discussions continue about easing planning requirements for smaller units, modular homes are increasingly seen as a practical alternative to traditional housing — offering speed, efficiency and lower environmental impact.

The Sun

Although not a complete solution to all housing challenges, companies like Cozy Homes Modular contribute a vital piece of the puzzle. Their emphasis on sustainability, quality and customer service positions them well in a market hungry for innovative housing solutions.

Conclusion

Cozy Homes Modular Ireland represents a new wave of homebuilding — one that embraces efficiency, sustainability and adaptability without sacrificing quality. As demand for flexible and more affordable housing grows, modular builders like Cozy Homes are redefining how people think about where and how they live.

Modular Homes for Modern Living

Transform your living experience with modular innovation. With us, you get more than a house – a sustainable, energy-efficient home that's ready in just weeks.

Proving That Reuse Is the Future of Sustainable Packaging

Plastic pollution is one of the defining environmental challenges of our time. Every day, tonnes of perfectly usable packaging materials are discarded, incinerated, or exported for recycling—often after just one use. At Green Bubble, we believe this represents not just an environmental failure, but a missed opportunity. Our mission is simple yet ambitious: to lead the charge in reducing plastic waste by inspiring individuals and businesses to extend the lifespan of all materials, championing a circular economy where nothing goes to waste.

Founded in Ireland, Green Bubble was created in response to a clear gap in the market. While recycling has long been promoted as a solution, reuse has been consistently overlooked. Yet reuse is the most effective way to reduce emissions, conserve resources, and cut waste at source. From day one, our focus has been on keeping materials in circulation for as long as possible—before recycling is even considered.

We work with businesses across retail, logistics, relocation, storage, creative industries and beyond to collect used transport packaging such as bubble wrap, foam rolls, cardboard boxes, hexacomb boards and acetate sheets. These materials are often classified as waste despite being in excellent condition. Through our partnership with Sunflower Recycling, a social enterprise with

deep roots in the local community, we ensure all materials are clean and dry before collection, carefully sorted, and prepared for reuse. The result is high-quality, affordable packaging that delivers both environmental and social impact.

At Green Bubble, we are committed to fostering a world where every item is valued, regardless of its size or perceived worth. A single roll of bubble wrap may seem insignificant, but when reused at scale, it can prevent substantial carbon emissions and eliminate the need for virgin plastic. Our work helps businesses reduce their waste disposal costs while also supporting ESG and CSRD reporting requirements through measurable waste diversion and carbon reduction data.

The impact is already tangible. In 2025 alone, Green Bubble supplied:

- 90 eco moving kits, reusing 1,350 cardboard boxes and 900 m² of bubble wrap
- 10,000 m² of foam rolls
- 7,000 m² of bubble wrap
- 205 acetate sheets
- 50 artwork shipping boxes / hexacomb boards

Each of these materials was kept out of incineration or export for recycling, extending its lifecycle and reducing demand for new production. This approach not only cuts emissions but also proves that circular solutions can be commercially viable.

Recognition of this work has followed. In December 2025, Green Bubbles founder, Peter Gergory, was honoured with Newstalk's Green Business Person of the Month Award, celebrating leadership in sustainability and innovation. This award reflects growing recognition that reuse-based models are essential if Ireland is to meet its climate and waste reduction targets. We have also been a finalist in national sustainability awards and are increasingly being approached by large organisations seeking support in managing their packaging waste more responsibly.

One of the most powerful aspects of Green Bubble's model is its emphasis on local impact. By keeping materials circulating within regional economies, we reduce transport emissions, support local employment, and strengthen community connections. Our collaboration with Sunflower Recycling ensures that environmental progress goes hand in hand with social benefit, providing work experience and training opportunities while building a more inclusive circular economy.

impact significantly. We are actively working towards developing a Reuse Platform—a digital system that will connect businesses with reusable materials to those who need them. This platform will enable better traceability, smarter logistics, and easier access to circular solutions, making reuse the default option rather than the exception.

To achieve this, we are actively seeking more material. Many companies still dispose of reusable packaging simply because they do not know there is an alternative. We encourage businesses of all sizes to rethink their waste streams and engage with reuse as a practical, cost-saving solution. The more material we can recover, the more we can divert from incineration, reduce emissions, and supply affordable packaging back into the economy.

At its core, Green Bubble exists to challenge the idea that sustainability must be complex or expensive. Our work proves that small changes—when repeated consistently—can deliver meaningful impact. By valuing materials, supporting communities, and putting reuse first, we are working towards a future free from plastic pollution.

Because the most sustainable packaging is the packaging that already exists.

Copperfish Lighting: Where Light Meets Story

In an age of mass-produced homewares and slick industrial design, Copperfish Lighting offers a refreshing alternative — one that trades uniformity for character, and anonymity for provenance. Born from a love of real materials and an eye for thoughtful design, Copperfish has carved out a niche for itself as one of Ireland's most interesting artisanal lighting brands.

Born in County Wicklow in 2016, Copperfish is the creation of Eoin Shanley, whose journey into lighting began during the painstaking restoration of a 200-year-old thatched cottage. Dissatisfied with the lighting available on the market and inspired by the beautiful materials and traditional techniques at hand, Shanley began creating bespoke lamps using salvaged and ancient timber — materials with a story to tell. What started as a solution to a personal need quickly grew into a business as friends and family began requesting pieces of their own.

Today, Copperfish remains rooted in that original ethos: handcrafted pieces made with intention, respect for materials, and an appreciation for sustainability. The workshop — tucked away in Rathnew, Co. Wicklow — is where each lamp is conceived and brought to life. Here, timber isn't just timber. It might once have been part of a silent rural church beam, a railway sleeper from a forgotten

line, or storm-tossed wood from an old dock. These origins imbue every piece with a distinct character: every mark, dent and grain becomes part of the lamp's story rather than something to be hidden.

Craftsmanship as Narrative
What sets Copperfish apart is not just the beauty of the finished product, but the philosophy behind it. Each lamp is individually handmade using time-honoured techniques, often with tools that are themselves antiques. Because of the age and irregularity of the reclaimed wood, modern cutting machinery isn't always suitable — instead, an old-world saw is used to shape the timber. This hands-on approach ensures that no two pieces are ever the same.

Designs span table lamps, floor lamps, ceiling lights and wall lights, all of which pair storied timber with industrial materials and warm, retro-style LED bulbs. The bulbs themselves are chosen not only for their aesthetic warmth — with amber tints reminiscent of candlelight — but also for their sustainability and longevity, boasting lifespans of around 30,000 hours.

This emphasis on story and sustainability resonates deeply with today's conscious consumers. In a world grappling with climate change and throwaway culture, Copperfish's approach — using storm-fallen, salvaged or reclaimed wood and

offering lifetime repair services — feels as responsible as it does beautiful. They've even signed up to Ireland's WEEE compliance scheme, ensuring responsible recycling of electrical components at end-of-life, and invite customers to return old lamps so the timber can continue its journey in a new piece.

Design That Speaks to Space and Soul
Copperfish's aesthetic is evocative: tactile, warm and undeniably rooted in material truth. Rather than shouting for attention, these lights whisper — gently illuminating a room with a glow that feels lived-in and intimate. Designers and homeowners alike have embraced their ability to elevate a space, offering layers of ambience that complement both contemporary interiors and historic homes.

Copperfish

The Irish Times

Indeed, the brand's reputation has grown beyond Ireland's shores. Copperfish has been featured as part of curated Irish design showcases, represented Ireland at international design events such as New York's Shoppe Object, and received recognition in major awards including the UK Gift of the Year awards and Ireland's Showcase sustainability accolades.

Where Tradition Meets Tomorrow
What makes Copperfish Lighting especially compelling is not simply its artisanal charm, but what it symbolizes: a reconciliation between heritage and contemporary living. In every piece there's a narrative woven from the past — old beams, forgotten docks, local forests — yet the result fits effortlessly into modern homes and spaces. It's lighting that doesn't just illuminate but invites a connection — to craft, to history, and to the quiet beauty of materials that have lived many lives. ✕
For those who look beyond the functional and toward the soulful, Copperfish offers more than lamps. It offers design with depth, where every glow carries the warmth of a story well told.

Copperfish

Storied lighting handmade from forgotten timber

TABLE | FLOOR | CEILING | WALL

Lights range from glamorous and eye catching to warm and inviting so whether you're lighting up a contemporary space or providing an oasis of calm in a corporate environment, we can work with you to create something really special. See some of our recent projects below.

Each lamp is unique, the colour, grain and finish of the wood will vary from lamp to lamp. All our lamps are made by hand in our studio in Rathnew, Co. Wicklow.

We like to work with natural, organic materials like salvaged, ancient timber and storm-fallen wood alongside brass and copper but we love to experiment so get in touch to see what we can create together.

DESIGN SOURCE IRELAND

Design Source Ireland Design & Construction trade show Returns to the RDS – March

Design Source Ireland is set to return to the RDS, Dublin on Thursday 5th and Friday 6th March 2026, bringing together Ireland's design and construction community for two inspiring days of connection, learning, and discovery.

Now firmly established as a key trade-only event in the industry calendar and with a keen focus on sustainability, Design Source Ireland is where ideas meet opportunity. With over 100 carefully curated exhibitors and 1,500+ visitors from across the design, interiors, architecture, and construction sectors, the event offers an unrivalled platform to explore new products, services, and collaborations.

Whether you are an interior designer, architect, developer, contractor, retailer, artist, or any industry supplier, Design Source Ireland is designed to support and elevate your practice. Visitors will have the opportunity to engage directly with industry-leading brands, emerging makers, and specialist service providers, all under one roof at the RDS.

What to expect in March 2026:

- 100+ Exhibitors showcasing the latest in interiors, materials, finishes, and design-led solutions
- 1,500+ Trade Visitors from Ireland's design and construction community
- Expert Guest Speakers from Ireland and beyond, sharing insight, innovation, and experience
- Talk to the Trade Initiative, encouraging meaningful conversations between specifiers and suppliers
- Interior Support Services Suite, offering practical guidance and professional resources
- The Learning Lounge, featuring CPD-accredited talks and training sessions, in conjunction with the Irish Green Building Council
- Late Night Opening on Thursday, perfect for relaxed networking and after-hours inspiration

For industry suppliers and service providers, Design Source Ireland offers a powerful opportunity to showcase your brand directly to decision-makers.

If you are interested in exhibiting at the 2026 event, DM now for registration details or email support@designsourceireland.ie to secure your spot.

Early Bird Tickets are now on sale and are available exclusively to trade professionals. Secure your place early at <https://dsirl.app/>

www.designsourceireland.ie

THE SOLAR AND HEAT RENEWABLES SHOW 2026

is organised by a collective of businesses operating in the Solar, EV and Renewable Heat Sector.

As Ireland's renewable energy market continues to expand, installers remain at the centre of its success, balancing evolving technologies, changing regulations and rising customer expectations. Against this backdrop, the Solar & Heat Renewables Show returns in 2026 as a key trade event designed specifically to support solar, heat, EV and electrical installers operating at the forefront of the energy transition.

Taking place at Naas Racecourse on 12 February 2026, the show has firmly established itself as Ireland's leading

Solar + Heat
renewables show
Ireland's Leading Solar, Heat Pump
and Renewables Show 2026

installer-focused renewables exhibition. With over 50 exhibitors, it provides a comprehensive view of the technologies, services and partnerships shaping the Irish market in the year ahead.

A significant development for 2026 is the expanded focus on renewable heat, marking the first year the show will feature a dedicated presence from leading heat technology manufacturers. Installers can expect to engage directly with exhibitors including Samsung, Midea, Vaillant and Becker & Wolf, reflecting the growing role of heat pumps and hot water solutions in residential and commercial projects. This addition recognises the increasing convergence of solar, storage and heat, and provides installers with a practical opportunity to explore integrated system design, product compatibility and real-world performance.

What continues to distinguish the Solar & Heat Renewables Show is its practical, installer-first approach. This is a working trade environment rather than a consumer-led exhibition, enabling installers to compare solutions side by side, discuss technical detail with manufacturers, and assess which technologies best suit Irish building types, climate conditions and compliance requirements.

Feedback from previous editions reinforces the value of this model. Exhibitors consistently highlight the quality of installer engagement, while attendees point to the relevance of the products on display and the strength of the relationships formed. Many within the industry have described the show as one of the strongest installer-focused renewables events in Europe, a reflection of both its scale and its technical credibility.

The exhibitor lineup spans the full breadth of modern installation work. Global solar PV and inverter manufacturers sit alongside specialists in microinverters, battery storage and smart energy management. Mounting system providers showcase rooftop and ground-mounted solutions designed for efficiency, safety and compliance, while EV charging brands

demonstrate the increasing integration of transport electrification within installer portfolios.

Beyond hardware, the show also brings together digital platforms, planning tools, wholesalers and industry bodies, offering installers insight into grant frameworks, system design optimisation and upcoming regulatory changes. In an increasingly complex market, this access to information is critical in helping installers operate efficiently and profitably.

For installers, the value of attending is clear: hands-on demonstrations, direct technical support, peer-to-peer networking and exposure to new products and revenue opportunities. It also provides a rare opportunity to step away from site work and engage with the wider industry in a focused yet informal setting.

The Solar & Heat Renewables Show takes place on 12 February 2026 at Naas Racecourse, Co. Kildare. Registration is free and open to installers across solar, renewable heat, EV and electrical disciplines.

NEAT GATES

As sustainability becomes a defining factor in how we build and live, homeowners and businesses alike are rethinking every element of their spaces, not just how they look, but how they perform over time. At the entrance to many properties sits a feature that often goes unnoticed in the green conversation: the gate.

With NEAT Gates, that's changing.

NEAT Gates is redefining what modern gate solutions can be, combining clean design, intelligent automation, and environmentally responsible materials to deliver gates that are as sustainable as they are secure.

At the heart of NEAT Gates' eco-friendly approach is aluminium. Unlike traditional timber or steel alternatives, aluminium offers exceptional longevity with minimal environmental impact. It does not rust, warp, or degrade over time, and it is 100% recyclable. This means fewer replacements, less waste, and a significantly longer lifecycle, a key principle of sustainable design.

A NEAT aluminium gate is built to last for decades, not years. Reduced maintenance requirements mean no harsh chemical treatments, no constant repainting, and fewer resources consumed throughout its lifespan. For environmentally conscious homeowners, architects, and developers, this durability translates directly into a smaller carbon footprint.

Sustainability at NEAT Gates goes beyond materials. Automation, often viewed as energy-intensive, is handled with efficiency firmly in mind. NEAT Gates' automated systems are designed to operate smoothly and precisely, reducing unnecessary energy usage.

Smart automation also contributes to greener living in less obvious ways. Efficient access control reduces unnecessary vehicle idling, improves traffic flow, and enhances safety within residential and commercial spaces. These small efficiencies add up, supporting cleaner air and more organised environments.

Design plays a critical role too. NEAT Gates' contemporary aesthetic ensures sustainability never comes at the expense of style. Clean lines, modern finishes, and bespoke designs allow each gate to integrate seamlessly into its surroundings, whether that's a modern family home, an apartment complex, or a commercial site,

Every NEAT Gate is made to measure, ensuring precision manufacturing with minimal material waste. This tailored approach not only delivers a superior fit and finish but also avoids the inefficiencies associated with off-the-shelf solutions that require modification or replacement. It's a smarter way to build, and a more responsible one.

Choosing NEAT Gates is about more than securing a property. It's about making a conscious decision to invest in quality, longevity, and sustainability. In a world where eco-friendly choices are no longer optional but essential, NEAT Gates offers a practical, stylish way to contribute to a greener future, starting right at the entrance.

For those who believe good design should work harder, last a lifetime, and tread lighter on the planet, NEAT Gates delivers a solution that truly lives up to its name.

POWERING INISHOWEN'S FUTURE FROM BUNCRANA

In the heart of Buncrana, the bustling hub of the Inishowen Peninsula in County Donegal, a new generation of electrical expertise is quietly shaping the way homes and businesses connect to power and sustainability. Eccles Electrical — sometimes referred to legally in company records as Eccles Electrical Services Ltd or Eccles Electrical Ireland Ltd — is one of the region's emerging players in the electrical services sector.

Founded in September 2024, Eccles Electrical is a relatively young company operating under the principal activity of electrical installation. Its registered address in Buncrana speaks to deep local roots and a commitment to serving the community where electricity has been a part of town life for well over a century — Buncrana was in fact one of the first towns in Donegal to receive electrical power back in 1905. [SoloCheck +1](#)

A Modern Take on Traditional Skills
While the company is new, its mission reflects a blend of time-honoured electrical expertise and forward-thinking solutions. At its core, Eccles Electrical offers a wide spectrum

of services that cover domestic wiring, installations, upgrades, and potentially renewable energy solutions — including solar photovoltaic (PV) systems designed to reduce household energy bills and carbon footprints. According to company information, solar solutions are a key part of their portfolio, aimed at helping customers harness sunshine to power their homes more sustainably. [2](#)

This dual focus — reliability in basic electrical work combined with a grasp of cutting-edge, energy-efficient technology — allows Eccles Electrical to straddle the demands of modern living while grounding itself in the everyday needs of local customers.

Community and Craftsmanship

Despite being a smaller operation compared with larger national installers, Eccles Electrical's presence is felt across Inishowen. The company advertises its services across the peninsula and offers tailored electrical solutions that range from thoughtful lighting installations to full system upgrades and renewable energy consultations. Local directories list Eccles Electrical among the trusted electrical contractors in the area,

highlighting their role in addressing both residential and commercial electrical needs throughout the region.

donegaldirectory.biz

What sets a business like this apart is its community knowledge: in a town like Buncrana, where residents and tradespeople often cross paths in daily life, reputation and personal relationships matter. Eccles Electrical seems to embrace this dynamic, engaging directly with customers in a way that larger, more impersonal chains might not. Behind the Company Name Official business registers show two related company names — Eccles Electrical Services Ltd and Eccles Electrical Ireland Ltd — both established in early September 2024 with directors who also have experience leading other Irish companies. This dual structure suggests an ambition to grow beyond purely local services while maintaining a strong base in Buncrana.

Behind the scenes, contact points like Johnny and Gerard — listed as primary contacts — indicate a hands-on leadership style where clients can speak directly to decision-makers. Eccles Electrical also publishes formal policies on data protection and customer communications, demonstrating a professional approach to privacy and corporate governance that aligns with EU and Irish standards.

Looking Ahead

In a part of Ireland where the landscape is ever-changing — from the rugged cliffs of Inishowen Head to the vibrant streets of Buncrana — energy needs are evolving too. Rising interest in renewable energy, energy-efficient homes, and smarter electrical systems presents an opportunity for businesses that can adapt. Eccles Electrical's focus on solar and advanced installations positions it well to ride this wave.

Residents in Buncrana and beyond are no strangers to electrical innovation — after all, their town was a pioneer in electrification in its early years. Today, Eccles Electrical carries that legacy forward, blending old-school craftsmanship with modern solutions to meet the demands of the next generation.

STUDIO B57

STUDIO PROFILE

Studio b57 is an independent lighting supply studio based in Northern Ireland, working across Ireland and Northern Ireland with interior designers, architects, developers and private clients. The studio was established to support projects where lighting is treated as an integral part of the overall design — not simply as a commodity, but as a carefully considered element of the space.

Studio b57 operates as a specialist lighting partner rather than a traditional reseller. The focus is on providing access to well-designed, high-quality lighting products alongside practical project support. The studio works closely with design teams to help align product selection with the visual intent of a scheme, technical requirements and budget expectations, ensuring that the specified fittings are appropriate for the project and deliver as expected.

The product portfolio includes a wide range of architectural and decorative lighting. The architectural range covers high-quality technical luminaires with strong visual discipline and robust performance, suitable for residential, hospitality, commercial and public environments. The decorative collection spans both classic and contemporary aesthetics — from traditional crystal chandeliers and heritage-style fittings to minimalist, sculptural and modern feature lighting. This breadth allows the studio to support projects of varying character and scale, from private homes to large hospitality and mixed-use developments.

Studio b57 is highly selective in the brands it represents. Each manufacturer is chosen based on design quality, consistency of product, reliability of supply and overall compatibility with the type of projects the studio supports. Rather than offering an excessive catalogue, the range is intentionally curated to ensure that every brand serves a clear purpose within the portfolio. As the studio grows, the brand selection continues to expand in response to client needs and emerging project requirements, allowing greater flexibility while maintaining a consistent level of quality.

In addition to product supply, Studio b57 supports clients throughout the procurement process. This includes assisting with product selection, providing technical information, reviewing specifications, coordinating quotations, and managing orders and deliveries. The studio aims to simplify what can often be a fragmented and frustrating process, offering a more coordinated and informed point of contact between designers, clients and manufacturers.

The studio's approach is rooted in real project experience and a strong understanding of how lighting is specified, procured and installed in practice. This allows Studio b57 to engage meaningfully with both creative and technical discussions, supporting designers without overriding their intent, and supporting contractors without overcomplicating the process.

Studio b57 works with a broad range of project types, including private residential, high-end homes, hospitality venues, restaurants, retail spaces, offices and multi-unit developments. Each project is approached with the same level of care, whether the requirement is for a single feature piece or a full lighting package.

Based in Northern Ireland, the studio serves clients across the island of Ireland, building long-term working relationships with design practices and project teams who value clarity, reliability and thoughtful product selection. Studio b57's role is not to dominate the design conversation, but to support it — helping ensure that good lighting choices are easier to make and easier to deliver.

Above all, Studio b57 exists to support projects where lighting matters: visually, technically and experientially.

EOLASENERGY

BER CERT ASSESSOR LIMERICK

A Building Energy Rating (BER) Certificate shows how energy efficient a house is. Rated from A (most efficient) to G (least efficient)

A BER assessor gathers all the information required to complete a BER during an assessment of your home. Your BER assessor will survey each room in the house, including the attic and garage, if present

- the building's construction type
- year of construction of original dwelling and any extensions
- floor dimensions, room height, window and door sizes
- the building's orientation
- insulation levels within the walls, roof and floor
- details of the space heating systems and heating controls
- hot water systems and water cylinders
- ventilation characteristics such as vents, fans and draft lobbies
- baths and showers
- lighting
- any renewable systems

We cover BER assessments in all the Limerick region and nearby surrounding areas

- Limerick City
- Limerick County
- Ardnacrusha/Parteen
- Cratloe
- Sixmilebridge
- Kilaloe
- Ballina
- Birdhill

SHEEHAN CARPENTRY:

CRAFTSMANSHIP BUILT ON TRUST IN TALLOW, WATERFORD

In an age of fast builds and mass-produced finishes, the enduring value of skilled craftsmanship has never been more important. At the heart of this tradition in West Waterford stands Sheehan Carpentry, a respected and reliable carpentry business based in Tallow, Co. Waterford, known for its commitment to quality, attention to detail, and honest workmanship.

Serving homeowners, developers, and businesses across Waterford and surrounding counties, Sheehan Carpentry has built a reputation grounded in practical experience and pride in the trade. Whether working on new builds, renovations, or bespoke carpentry projects, the company approaches every job with the same philosophy: do it right, do it well, and do it to last.

What sets Sheehan Carpentry apart is its ability to combine traditional carpentry skills with modern building standards. From structural work such as roofing, first-fix carpentry, and timber framing to second-fix details including doors, stairs, flooring, and custom joinery, the team delivers results that are both functional and visually impressive. Each project is carefully planned, professionally executed, and tailored to the client's needs.

Based in the historic town of Tallow, Sheehan Carpentry is deeply rooted in the local community. Much of the company's work comes from repeat customers and word-of-mouth recommendations—an achievement that speaks volumes in an industry where trust and reliability are everything. Clients know that when they engage Sheehan Carpentry, they are dealing with a tradesman who shows up on time, communicates clearly, and treats their home or site with respect.

Home renovations and extensions are a particular strength of the business. Sheehan Carpentry understands that upgrading a home is both a financial and emotional investment. From the first consultation through to completion, clients are guided through the process with transparency and practical advice. The result is a finished space that not only enhances the value of the property but also improves how it functions day to day.

In recent years, demand for high-quality carpentry has increased as homeowners look to future-proof their properties through better design, energy efficiency, and durable materials. Sheehan Carpentry

has responded by staying up to date with modern construction techniques while maintaining the hands-on craftsmanship that defines the trade. This balance ensures every project meets current regulations without losing the character and solidity of traditional carpentry.

The company also works closely with other local trades, creating smooth, well-coordinated builds from start to finish. This collaborative approach minimises delays, keeps projects on schedule, and ensures the highest standards are maintained throughout.

At its core, Sheehan Carpentry is a business built on values—honesty, reliability, and pride in a job well done. In an industry often judged by its weakest links, this Waterford-based firm continues to stand out by consistently delivering strong, dependable results.

For anyone in Tallow, Waterford, or the surrounding areas seeking a carpenter they can trust, Sheehan Carpentry represents the very best of Irish craftsmanship: skilled hands, sound advice, and work that truly stands the test of time.

IRELAND'S FAVOURITE CARBON NEUTRAL WOODLOG

At Flamers, Sustainability is at the heart of everything we do.

Our eco-friendly wood logs are made from 100% recycled timber, giving new life to materials that would have otherwise gone to landfill. By choosing our recycled wood logs, you're not only getting a clean, efficient source of fuel, but also reducing the impact on the environment.

We're committed to helping you enjoy warmth and comfort in a way that's kinder to the planet, one recycled log at a time. Together, we can fuel a greener future.

Established in 2009, with roots in the timber industry as far back as 1951, Flamers is a Guaranteed Irish Family Owned and Operated Brand.

Ireland's Award-Winning Sustainable Solid Fuel Company

BUILDING CORK'S FUTURE:

The Heart and Craft of Timothy Bowen Construction

In the ever-evolving tapestry of Ireland's built environment, small builders are quietly vital. They transform aspirations into walls and spaces, stitch neighbourhoods together with brick and mortar, and bring life to the concept of "home". In Cork, one such company quietly exemplifies this ethos: Timothy Bowen Construction.

Founded in 2013 this local construction firm has steadily built a reputation rooted in craftsmanship, versatility, and a personal commitment to clients seeking quality residential and renovation work.

At first glance, Timothy Bowen Construction might appear modest in scale compared to Ireland's larger contractors. Its focus isn't on sprawling commercial complexes or major civil engineering projects; instead, the company's strength lies in the details — home extensions, renovations, and maintenance projects that deepen a family's connection to their living space. Over more than a decade, the firm

has expanded from a carpentry-based service into a multi-trade operation, offering comprehensive construction solutions that encompass design-to-completion builds within clients' budgets.

This transition from single-trade carpentry to a multifaceted construction service speaks to a broader trend in the Irish market. Homeowners are increasingly looking for builders who can navigate a wide range of needs — from structural work to finishing touches — without the friction of coordinating multiple subcontractors. Timothy Bowen Construction embodies this holistic approach. Clients seeking a home extension, a complete renovation, or ongoing maintenance find a team that appreciates both the macro and micro elements of a project.

A distinctive aspect of the company is its grassroots ethos. Rather than positioning itself as a faceless contractor in an industry often criticised for

impersonal dealings, Timothy Bowen Construction foregrounds relationship-driven service. Homeowners speak directly with during consultations — a level of engagement that builds trust and ensures that expectations align from the earliest sketches to the final nail. This personal touch isn't merely marketing fluff; it's a philosophy rooted in the belief that a home is deeply personal and every detail matters.

In Cork and its surrounding towns, the renovation and extension of homes aren't just commercial transactions; they're investments in community stability and longevity. Families rarely move far from their roots, so upgrading and adapting existing homes becomes a preferred path, whether for growing families or for those seeking modern comfort in a cherished setting. In this context, Timothy Bowen Construction operates not just as a builder, but as a steward of homes and heritage.

For clients, this local focus brings practical advantages. Proximity matters in construction — from navigating council planning permissions to sourcing materials and coordinating trades in a region where relationships and timing are everything. Being a local contractor means quicker responsiveness, deeper knowledge of Cork area planning norms, and a network of tradespeople who share a commitment to quality and reliability.

Certainly, the Irish construction sector has its share of cautionary tales — large firms collapsing under market pressures, and smaller operators facing scrutiny over quality and deliverability. But what distinguishes Timothy Bowen Construction is a steady, incremental growth that refuses to compromise on core values. The company's filings with the Companies Registration Office show it as a normal, active enterprise

operating responsibly within its market niche.

In a broader sense, the story of Timothy Bowen Construction mirrors the resilience of Ireland's housing landscape itself. As the country grapples with housing demand, sustainability concerns, and the need to retrofit older properties to meet modern energy standards, firms that blend craftsmanship with adaptability will be central to the next phase of Irish construction. The company's evolution from carpentry roots to a full general contractor reflects this shift: a willingness to grow with customer needs while holding firm to craftsmanship that started it all.

For homeowners in Cork and beyond, companies like Timothy Bowen Construction offer more than bricks and beams. They offer confidence — that a vision for a home can become reality, that budgets can be respected, and that quality can endure.

Building Your Dream

Our team want to help you improve your home to make it your forever home whether it is an extension or renovation or both. We will make your home, your dream home.

We provide a team of highly trained and professional trades persons who will take your design from paper to reality all while working within your budget.

RENOVATIONS EXTENTIONS MAINTENANCE

We started our business in 2013 as a Timothy Bowen Carpentry & Maintenance but through different collaborations the decision was made to upgrade our business from a single trade based business to a multi trade operation to become Timothy Bowen Building & maintenance. We still operate a full carpentry service as we feel most builders forget that its the smaller projects are what gave us the experience to help us move on to the bigger projects. We pride ourselves on our quality of work and the ability to finish on time and more importantly on budget.

PORTAMOD REDESIGNING SPACE IN IRELAND

In the rolling landscapes of County Louth, a quiet revolution in construction is taking shape. PortAMod, a Collon-based firm founded in 2021, is rapidly gaining a reputation as one of Ireland's most dynamic and innovative producers of modular and portable buildings — blending craftsmanship, engineering experience and community commitment to meet the evolving demands of both commercial and public sectors.

While modular buildings are sometimes dismissed as simple “portacabins,” what PortAMod has achieved goes far beyond that cliché. The company's ethos is rooted in producing high-quality, bespoke off-site construction solutions that are as flexible as they are durable. From bright, spacious classrooms to secure welfare units, PortAMod's portfolio illustrates just how versatile modular design can be.

BORN FROM EXPERIENCE

PortAMod was established in April 2021 by a team with deep roots in modular construction, engineering and manufacturing. Despite its relatively recent inception, the company has already made a significant impact on the Irish construction landscape. Its purpose-built manufacturing facility in Collon, Co. Louth serves as the heart of operations where every unit — whether a simple site office or a bespoke garden room — is designed and produced.

The company's commitment to quality is underlined by its ISO 9001 certification,

reflecting a structured approach to quality management and continuous improvement. The focus on controlling production in a factory environment not only helps to maintain high standards but also mitigates many of the uncertainties associated with traditional on-site construction, such as weather delays or inconsistent workmanship.

FROM CONCEPT TO COMPLETION

What sets PortAMod apart in a crowded market is its end-to-end approach. Potential clients are engaged from the very start — whether they're schools, local councils, healthcare providers, retail businesses or private clients — and guided through planning, design, manufacturing and installation. This ensures that each project is tailored precisely to the client's requirements.

The range of buildings is impressive. Standard offerings include modular offices, welfare units, classrooms and retail spaces, but the company's portfolio also reveals custom projects such as anti-vandal offices and secure storage units for construction sites, bespoke changing room facilities for sports clubs, and even specialised lifeguard huts.

For example, PortAMod supplied and installed modular classrooms with tailored specifications for St. Mochta's National School in Louth Village — a project that highlights how modular solutions can support educational needs, especially when traditional building methods might be slower or more disruptive. Beyond education, PortAMod's units have been used to support welfare facilities for local authorities, bespoke wellness spaces, and even modular extensions for existing buildings — illustrating the versatility of their product line.

GROWTH, RECOGNITION AND LOCAL IMPACT

PortAMod's success hasn't gone unnoticed. In 2023, the company was awarded the Best Start-Up Award at the Louth Enterprise Awards, a recognition that celebrated not just its entrepreneurial spirit but also its tangible contribution to the local economy. Within just two years of operation, PortAMod had grown to employ around 15 staff members and announced ambitious plans to expand both its workforce and facility.

This growth is significant not only for the company but for the wider community in County Louth. By harnessing local skills and working with regional suppliers, PortAMod is embedded in the local economic ecosystem, creating jobs and nurturing talent in a sector that blends traditional craft with modern manufacturing technologies.

MODULAR FOR THE FUTURE

As Ireland faces increasing demand for flexible, efficient building solutions — whether for rapid school expansions, temporary healthcare facilities or adaptable commercial spaces — PortAMod's model offers a compelling template for the future of construction. Their focus on sustainability, quality and customer engagement positions them at the forefront of the modular movement in Ireland.

In an industry often defined by delays and cost overruns, PortAMod's approach demonstrates how thoughtful design, meticulous manufacturing and community-centric values can redefine what modular truly means — not just as a building method, but as a catalyst for local innovation and growth.

Manufacture and deliver portable & modular buildings for a wide range of uses.

TOTAL SENSORY

Creating Calm and Connection in Irish Learning and Care Environments

In recent years, Ireland's awareness of sensory needs in educational, healthcare and residential settings has grown significantly. At the heart of this evolution is Total Sensory Solutions Ltd, a family-run Irish company that has become a leading voice in designing and installing sensory spaces that support wellbeing, learning and inclusion. What began as a passionate idea has developed into a trusted partner for schools, clinics, and families throughout the country — and its story offers insight into why sensory design matters now more than ever.

Founded in 2019 and based in Gormanston, County Meath, Total Sensory Solutions Ltd brings more than 25 years of experience in the educational sector to its work. Although relatively young as a registered company, its team's depth of knowledge stems from years of collaboration with educators, therapists, and families who understand first-hand how thoughtfully crafted environments can transform experiences for children and adults with sensory processing needs.

At its core, Total Sensory is driven by the belief that the spaces we inhabit deeply influence how we learn, engage and feel. The company specialises in planning, designing and installing multi-sensory rooms, para-education zones, safe rooms and multi-activity areas that are tailored to the unique sensory needs of users. Whether in a special education classroom, an ASD unit, a clinic, or a family home, these environments offer calm, stimulation and support — all underpinned by evidence-based design principles.

What Sensory Spaces Do

To the uninitiated, a sensory room might look like a colourful play area — but sensory environments are far more intentional. They are designed to engage and regulate the senses: sight, sound, touch, balance and movement. Through carefully selected elements such as bubble tubes, interactive projectors, fibre optic lighting, sensory wall panels, bean bags and soft play equipment, these spaces give individuals opportunities to engage in sensory exploration in a controlled, supportive way.

Such environments can improve concentration, reduce anxiety, foster calmness, and encourage participation — benefits that are especially important for people with autism spectrum disorder (ASD), sensory processing challenges, learning differences, or anxiety. Sensory rooms are increasingly seen in schools, healthcare facilities and community settings as essential tools for supporting diverse learners and individuals.

A Personal, Professional Approach

What sets Total Sensory apart is its emphasis on a personalised service. From the initial consultation to the final installation, the company works closely with clients to understand their needs and goals. Whether collaborating with a principal looking to create a calming space for students, or helping a family design a sensory room at home, the company's team listens, advises, and brings ideas to life with care and professionalism.

Clients consistently praise Total Sensory's attentive approach. Educators from schools around Ireland — from Holy Family School in Waterford to Scoil Ui Mhuiri in Louth — speak of how sensory spaces designed by Total Sensory have become cherished areas that encourage relaxation, foster calm, and support learning for pupils of all abilities. Testimonials highlight not just the quality of the installations but also the team's willingness to guide clients through design decisions and product choices.

Innovation in Sensory Products

In addition to room design, Total Sensory offers an extensive range of products that enhance sensory engagement. These include interactive systems like the SENse Flex Interactive Sensory System — a portable projector that creates engaging, movement-responsive visual displays — along with complete sensory play boxes that stimulate sight, sound, touch and smell. These products allow educators and families to create flexible sensory experiences tailored to individual needs. The company's product catalogue reflects a commitment to inclusivity and accessibility, offering solutions that support both calming and active sensory engagement. From tactile wall panels to digital lights and interactive tools, the range is designed to meet a broad variety of sensory needs in diverse environments.

Looking Ahead

Total Sensory Solutions Ltd has quickly become a trusted name in sensory design across Ireland. Its blend of experience, creativity and client-centred service has helped many schools and families unlock the potential of sensory spaces. As awareness grows about the importance of environments that support emotional regulation and sensory engagement, Total Sensory is poised to continue shaping spaces that help individuals thrive — one sensory room at a time.

In a world where comfort and connection are increasingly recognised as part of education and care, companies like Total Sensory are not just designing rooms — they are creating opportunities for development, peace, and belonging in communities across Ireland.

Big Plans IRL

Why CGI Is Becoming Essential Before You Build

The idea for the business began in a very practical way. As an architectural graduate, I started creating CGI walkthroughs for family members and people within my local community who were planning to build or renovate their homes. Like many homeowners, they had floor plans and drawings but struggled to truly visualise how their spaces would feel once built.

Big Plans IRL was built around one simple belief: before you build a home, you should be able to fully experience it.

Being able to walk through their future home in 3D — understanding scale, layout, light and flow — immediately changed how they approached decision making. It quickly became clear just how valuable this process was. Clients began identifying design issues long before construction started, allowing changes to be made while they were still simple and cost-effective. Small adjustments at this early stage often prevented expensive alterations later on, saving time, money and a great deal of stress.

As projects progressed and finished homes closely reflected what clients had first seen on screen, word of mouth spread naturally through friends and family. From there, Big Plans IRL grew into a dedicated CGI visualisation service.

With a background in architecture, I approach CGI as a design tool rather than simply a visual aid. My training ensures that every model is accurate, well-proportioned and grounded in how buildings function. This allows clients to trust what they are seeing and to use CGI walkthroughs to guide key design decisions with confidence.

Originally from Carlow and now based in Cork, I work with homeowners across Ireland and further afield. Each project is collaborative, with clear communication throughout the process — from early concepts right through to revisiting designs as homes near completion. There is no better feeling than watching a project move from a digital walkthrough to a finished, lived-in space.

That ongoing connection with clients is what sets Big Plans IRL apart. Seeing projects transition from CGI to reality consistently reinforces the power of visualisation. Clients often remark on how closely their completed homes reflect what they first experienced on screen, which is incredibly rewarding.

At the heart of my work is a belief that CGI represents the future of home design and construction. Building a home is one of the biggest investments most people will ever make, yet it has traditionally relied on drawings that can be impersonal and difficult to interpret. CGI gives homeowners a true understanding of their home before building begins.

By helping clients move forward with clarity and confidence, CGI bridges the gap between drawings and real life. Readers planning a build or renovation are invited to explore more projects on Instagram, where digital walkthroughs continue to become real homes.

BIG PLANS IRL

Now you can walk through your floor plans before it's real!

If you've got floor plans, renovation ideas, or just want to see your space come to life in 3D — I've got you covered!

- Catch issues before you build
- Have confidence in your plans.
- Visualise your space - exactly how it will be!
- Quick turnaround
- Realistic 3D visuals

Scan to watch a CGI walkthrough

CGI helps clients save time and money by identifying design issues early — before construction begins!
